

SAGINAW COUNTY FAIR

Market Swine Vaccination Affidavit

All market swine at the Saginaw County Fair are required to have two vaccines(a vaccination and a booster vaccine within 2-3 weeks of the first vaccine) for Swine Influenza and a 5 way that includes the following: Actinobacillus pleuropneumoniae, Bordetella bronchiseptica, erysipelothrix rhusiopathiae, haemophilus parasuis, and pasteurella multocida. One of these vaccinations (either the initial vaccine or the booster) must be given by an accredited veterinarian within 45 days preceding weigh-in at the fair or admission to the fair will be denied. If these vaccines were previously administered by the breeder or exhibitor a booster vaccine may not be required. The meat withhold on these vaccines is 21 days so the final vaccine cannot be administered later than 21 days preceding the fair.

All market swine are strongly recommended to have received dewormer within 45 days of the fair administered by an accredited veterinarian, exhibitor, breeder, or 4H leader. Make certain that the specific meat withhold time for the deworming product used is followed.
